

YOU'RE GETTING A MINI MUSEUM!

The Mini Museum is a hand-crafted collection of rare and unusual specimens from Earth and beyond.

Featuring amino acids captured during the birth of the solar system, the Fourth Edition of the Mini Museum is a journey spanning billions of years across time, space, and life!

You'll visit the bright highlands of the Moon and witness cataclysmic events here on Earth, examine hundreds of millions of years of evolution, from powerful predators on land and in the sea to birds and rodents of unusual size. At last, you'll come to the shores of our very own moment in the long story of life here on Earth and explore the creativity and resilience of humanity. Then, when you've reached the end you'll turn back toward the stars and marvel at the wonder of life.

In total, the Fourth Edition of the Mini Museum contains 29 specimens, a truly awesome collection to have and to explore and it will all be right there in the palm of your hand very soon!
